Target Flowcrete FS

High performance concrete silica fume based

Target Flowcrete FS is a high performance concrete with silica fume. An air-entraining agent is incorporated in the dry product to produce a concrete having good resistance to freezing and thawing. Shrinkage compensating agents are included to minimize plastic shrinkage.

Target Flowcrete FS can be used for new constructions and for structural concrete repairs.

Is designed for the following uses:

- New constructions and structural concrete repairs
- For application requiring a high quality concrete at any consistency between plastic and flowable.
- Where the quantities involved or placement conditions make the use of conventional ready-mixed concrete impractical.
- Concrete with a maximum aggregate size of 10 mm (3/8 in).
- Levelling beds with a thickness of 25 mm (1 in) or more.
- For concrete pours and surfaces requiring Class C-XL Exposure Classification (CSA A23.1).

Please refer to the technical data sheet for more details and instructions.
